

# SWISH

casegoods for people who work with people

# SWISH™

*7 work styles for people who work with people... Swish is a modular caseworks system that is light, open, flexible and functional! Designed to facilitate today's team-oriented collaborative work flow, Swish promotes efficiency and productivity with a vast offering of worksurfaces, storage components and accessories that can be specified in a multitude of configurations.*

*We've identified 7 basic work styles and environments to demonstrate that Swish is perfect for anyplace where people work with people...*

#### **back to back**

Individual stations have shared storage components and/or worksurfaces that are connected as a single unit. People have the ability to work in a semi-private setting, or when needed, simply turn around to collaborate with a co-worker.

#### **integrated collaboration**

By incorporating collaborative components, a Swish workstation can be created to invite collaboration. Combine individual stations, meeting components, storage opportunities and seating options into unique configurations that turn spaces into multi-functional places.

#### **forward-facing run**

Individual stations are linked together, often using shared components to maximize space and promote productivity in typical repetitive task environments. Specify a totally open run to foster employee interaction, or separate stations with privacy screens and upper storage to help workers concentrate on tasks.

#### **benching**

The modern equivalent of the "community" table where people work alongside each other, with their own personal space and access to today's office amenities. Benching configurations are popular with today's touchdown employee as well as with those who need a permanent workspace with added levels of storage and supplemental seating.

#### **private office**

While collaborative spaces are providing a new dynamic for the office environment, there are still tasks that require the quiet solitude of a private office. Multi-functional desks, credenzas, L units and U units, all with layered capabilities, are scaled to perform in this role.

#### **teaming**

The simple concept of working together is never more relevant than today, and now there is furniture that specifically supports and encourages communication and sharing. If your daily tasks involve working side by side then linked worksurface shapes will place you in close proximity to each other, while still allowing each the ability to work independently.

#### **conference**

Traditionally closed door spaces for formal meetings, conference areas have evolved to include anyplace where people might discuss, present or work together on a project. By incorporating work tables, modular storage, power and data support, and integrated seating it's easy to produce environments that support all sizes of meetings and presentations.

for people who work with people!

swish

**Light, open and ready to work...**

Swish can create units that satisfy the need for collaboration as well as the wants of the individual. Modular construction with layered surfaces, multiple storage component heights, privacy accessories and integrated electrical provide maximum flexibility and superior specification opportunities.

PAGES 06 & 07

**WORK STYLE back to back**

Individual stations have shared storage components and/or worksurfaces that are connected as a single unit. People have the ability to work in a semi-private setting, or when needed, simply turn around to collaborate with a co-worker.

**Extended Pedestal, Perch Seating**

Extend support pedestals beyond the worksurface and use cushions to create the perfect perch for spontaneous meetings, casual conversations and places where the space for guest seating may be limited.

**Side Access Storage**

Tall storage units are perfect for placing at the end of a run with a bench below to get the most use out of every side. Use the upper sides for dry erase or tackboards and the lower drawers for individual needs. Easily accessible open storage has adjustable shelves.

swish

**Turn a space into a place...**

A landscape of layers will let light into every corner of a space, turning it into a bright and airy place where people want to be. Swish then promotes working together, as well as individually, with a wide offering of integrated collaboration conference tables, shared workspaces, central storage, bench seating and adjustable height tables.

PAGES 08 & 09

**WORK STYLE integrated collaboration**

By incorporating collaborative components, a Swish workstation can be created to invite collaboration. Combine individual stations, meeting components, storage opportunities and seating options into unique configurations that turn spaces into multi-functional places.

**Back Painted Glass**

Hinged door overheads are available with white back painted glass, providing dry erase functionality and a sleek design element that complements the Swish extruded aluminum supports.

**Privacy Screens**

Simple brackets mount to the underside of workspaces and hold privacy screens in place, yet allow them to be easily removed to create uninterrupted workspaces.

swish

**One unit, multiple functions...**

Working in a board room is so yesterday. Get more accomplished by integrating personal, meeting, work and lounge spaces into a single footprint with Swish elements. And by combining various height worksurfaces with integrated seating and adaptable storage you'll have just what you need, when you need it!

**Integrated Seating**

Cushion top benches and built-in seating provide comfortable alternatives for meetings and quick collaborations with coworkers and guests.

**Bench Height Storage**

Choose from open shelves, hinged doors, a sliding door or multiple drawer configurations to indulge all your storage desires.

**Boomerang Top**

When linked with each other back to back, a niche is created that is ideal for nesting a mobile table to turn workstations into a conference area.

**Lounge**

Unique to Swish are upholstered back benches with either an open shelf below the seat or legs for support, and matching lounge height tables.

**WORK STYLE integrated collaboration**

By incorporating collaborative components, a Swish workstation can be created to invite collaboration. Combine individual stations, meeting components, storage opportunities and seating options into unique configurations that turn spaces into multi-functional places.

swish

**Pedestal Storage & Support**

Swish pedestals offer all the storage configurations you expect from a hard-working casegoods line; locking drawers, integrated wire access, alternate pull locations and optional power infed access.

**Leg Form & Function**

Swish extruded aluminum proprietary legs and supports are engineered for maximum strength and durability. The interior of the leg is intended for wire management with a removable, quick access cover.

**Productive style for functional environments...**

There is no rule that says repetitive task environments have to be drab. Gently arching privacy screens, tackboards, extruded supports, worksurface electrical and bench seating are a few of the details that make Swish not only a productive specification but also a setting that is pleasing to the eye.

(Worksurface plenum can be brought forward to create a clean aesthetic on select storage units.)

**WORK STYLE forward-facing run**

Individual stations are linked together, often using shared components to maximize space and promote productivity in typical repetitive task environments. Specify a totally open run to foster employee interaction, or separate stations with privacy screens and upper storage to help workers concentrate on tasks.

swish

**Privacy Screen & Tackboard**

Privacy screens are available in rectangular or fin shapes, with or without tackboards, and come standard in frosted acrylic, or choose optional premium patterns.

**Undersurface Storage**

Hinged door vertical storage cabinets are excellent for numerous items (like laptop bags) and when used as supports they create more leg room under the worksurface than standard pedestals.

**Touch down, work, and back to the field...**

Even if the work force is always on the go, they still need to come to the office and “touch down” at a simple worksurface with minimal storage and connect with their coworkers, gather references and recharge for the next project or meeting. Swish provides the mobile worker with a place to land when they need it (be careful, they may not want to leave).

**WORK STYLE benching**

The modern equivalent of the “community” table where people work alongside each other, with their own personal space and access to today’s office amenities. Benching configurations are popular with today’s touchdown employee as well as with those who need a permanent workspace with added levels of storage and supplemental seating.

**Modular Storage & Seating**

Using standard components, it’s a cinch to produce a custom storage unit for community materials. Utilize overhangs with leg supports to allow light to filter through a space for a natural feel in the environment.

swish

**Benching for the not-as-mobile worker...**

Benching units aren't just for the mobile worker. Today's technology savvy workers need just a few layers of storage with easy access to materials and personal items in a benching configuration. The layered surfaces of Swish keep the environment open and airy while modular componentry means growing businesses can add stations and accessories as their needs require.

PAGES 16 & 17

**WORK STYLE benching**

The modern equivalent of the "community" table where people work alongside each other, with their own personal space and access to today's office amenities. Benching configurations are popular with today's touchdown employee as well as with those who need a permanent workspace with added levels of storage and supplemental seating.

**Cubby Organizers**

Swish cubbies are exceptional for paper management and perfect for preserving sight lines and letting light fill a space.

**Modular Storage & Tops**

Modular tops are designed to span multiple storage components, giving the look of a custom unit while affording the flexibility of reconfiguration. Create unique specifications by choosing contrasting colors.

**Mobile Pedestal**

Put it anywhere you need it, easily move large amounts of files, use it as additional seating and then tuck it away again.

**A modern modular office...**

*Swish makes a visual impact with its layered surfaces (for work and storage) and its clean lines, but it's the abundant and varied storage combined with integrated seating (bench and couch) and electrical which makes this the private office that everyone covets. With everything at arm's reach, just nestle into the nook top and surround yourself with the job at hand.*

**The warmth of modular...**

*Swish is more than clean and sleek, it's also rich, polished, and an excellent choice for contemporary managers who want to balance modern expectations with tradition. With the natural feel of Brazilwood, a fine arced worksurface, layered wall mount overheads, bench height storage, and 360-degree electrical distribution you'll be able to combine function and sophistication with a warmth that's normally only found in wood casegoods.*

**WORK STYLE private office**

While collaborative spaces are providing a new dynamic for the office environment, there are still tasks that require the quiet solitude of a private office. Multi-functional desks, credenzas, L units and U units, all with layered capabilities, are scaled to perform in this role.

swish

#### Freestanding Tables

Add flexibility to any space with a pneumatic (standard to stand up) or ratcheting (standard to counter) adjustable height table that can be topped off with either a round or square shape. Choose casters for mobility, or glides if you don't want your table wandering around.

#### Accessory Rail & Accessories

Use an accessory rail to keep often used items close at hand and easy to access with office organizers and shelves. Accessory tools can be mounted to both sides of a rail and slide horizontally for optimum positioning.

#### Self-supporting "and" side by side...

It's a breeze to create a panel-less team environment in a small footprint using Swish self supporting components. Extruded legs and storage pedestals support adjoining worksurface elements and keep spaces visually light. They also provide power access and wire management to accommodate the technology needs of today's business teams. Privacy screens delineate personal space and allow for interaction between workers for collaborative tasks.

#### WORK STYLE **teaming**

The simple concept of working together is never more relevant than today, and now there is furniture that specifically supports and encourages communication and sharing. If your daily tasks involve working side by side then linked worksurface shapes will place you in close proximity to each other, while still allowing each the ability to work independently.

swish

**Designed for meetings...**

Whether it's an in-person meeting of multiple parties at a single table or a conference call between smaller parties from distant locations, there's a Swish setting that will encourage and support sharing ideas and solving problems. Work tables and modular units work together to provide a firm foundation for any discussion or presentation, with style and flair.

**Stand Up Collaboration Table**

Collaboration tables can be supported at stand up height with full drawer pedestals, maximizing storage opportunities and using a minimum footprint when space is at a premium.

**Wire Management Grommets**

The unique Swish teardrop grommet is designed to work with and complement the extruded support system. Worksurfaces include grommets as standard in a variety of positions.

**WORK STYLE conference**

Traditionally closed door spaces for formal meetings, conference areas have evolved to include anyplace where people might discuss, present or work together on a project. By incorporating work tables, modular storage, power and data support, and integrated seating it's easy to produce environments that support all sizes of meetings and presentations.

swish

**Wire Management**

Swish extruded legs have been designed with an integrated wire management channel and cover to neatly organize cords below worksurfaces and under overheads.

**Worksurface Power & Data Access**

Soft-touch, flip-top power and data access is available so connectivity is always at reach, perfect for charging personal electronic devices like cell phones and cameras.

**Wire Management Grommets**

Exclusive to Swish is a molded teardrop grommet and cover that reflects the materials and shape of the extruded support system.

**Multi-circuit, multi-directional electrical...**

Swish is designed and engineered to supply power and data for single and multiple unit configurations, hidden from view and easy to access. Every Swish unit incorporates a wire pass through for jumpers and cables that support a clean aesthetic and desired technology placement. Specifying a powered station is as simple as choosing an electrical option and measuring for jumpers to route the power.

Multiple infeed locations are offered to bring power into a unit in the most convenient way, whether using a hardwired source or a standard plug. Power accessibility is then centrally located within the unit under worksurfaces. Channel cords from devices through grommets and along wire management troughs, or decide to bring power directly to the desktop with an assortment of soft-touch, flip-top power and data access units.

**Power & Data Infeed (bench height)**

Side access grommets are standard on all bench height and tall storage units, and are ideal for bringing power and data into a unit from a standard height wall source.

**Power & Data Infeed (floor level)**

If power and data must enter where there is not a grommet, use field installed grommets.

**360-degree**

Power and data is efficiently routed vertically and horizontally below the worksurface through integrated wire management.

Workspace Shapes

**Supports** Specially tooled Swish extruded aluminum legs and supports correspond with grommets above and below the worksurface. The interior conceals cords with a removable, quick access cover. **Lounge Tables** Unify an integrated seating arrangement with a coordinating Swish lounge table, available with square, rectangle or triangle top shapes. **Overheads with Doors** Keep items hidden but easily accessible with hinged or sliding doors on overhead storage. Optional locking doors are available on hinged units. **Overheads with Cubbies** Choosing overhead storage and cubby combinations provide for “at reach” management of paper and reference materials.

**Workspace Overhang** A generous approach side overhang on select worksurfaces allows guests and coworkers to get close without knocking knees or marring desks. **Privacy Screens & Modesty Panels** Easily mount or remove privacy screens and modesty panels to tailor a worksurface for the task at hand. Both are available in 9” and 15” heights in varying lengths. **Materials** Make a statement by selecting from an assortment of premium acrylics that complement a balanced standard offering of surface materials. **Workspace Shapes** Gently arcing fins, ergonomic nooks, flexible boomerangs, collaborative 120s and hardworking rectangles are all offered in an assortment of sizes that will fit your space and need.

**details, features & options**

Swish modular componentry can be specified for a single office or an entire building. Learn more about the amazing capabilities of Swish by visiting [jsifurniture.com](http://jsifurniture.com) and reviewing the Swish price list and specification guide.

swish

**Swish Supports** Double concave, extruded aluminum spacers and legs incorporate a wire management channel and are anodized for consistent color, texture and durability. **Swish Pull** A sleek, matching aluminum pull has a recessed lip for fingertips that makes opening drawers effortless. **Pull Locations** All Swish drawers are pre-drilled on the backside for multiple positions, making for a smooth aesthetic when the drawer is opened and a last-minute change of pull positions uncomplicated.

**Floating Worksurfaces** Swish is designed around a floating work surface aesthetic that is desirable and practical. Route cords simply and smoothly under the work surface, hidden by an acrylic plenum that snaps on and off for even easier access. **Swish Edge** All work surfaces and tops have a coordinating PVC eased edge. The flat profile of the eased edge is excellent for linking tops and specifying units in challenging spaces.

**Pre-Configured Models** Ordering complete desks, credenzas and pedestals with single model numbers makes specifying an office with Swish even quicker and simpler. Each unit ships complete with work surface, supports and all necessary items for assembly.
